Company Brochure Study Tour Summer 2027

Study Tour to South Korea and Taiwan 2027
E.T.S.V. Scintilla

“Change the Scope”

We are SPOCK 8, a group of 21 students planning to go on a study tour to South Korea and Taiwan in the Summer of 2027.During this study tour we will get the opportunity of a lifetime to visit the companies that make the worlds most innovative products and universities that do groundbreaking research. While also experiencing culture and nature in South Korea and Taiwan up close.

We are planning to visit companies specializing in various aspects of our field, from power grids, some of the largest structures on earth, to chip design and fabrication, some of the smallest structures on earth.

To realise this educational adventure we are offering sponsorships. The sponsorships possibilities provide exposure for your company. All packages are listed below, however feel free to contact us for a personalised offer.

Page in the reports:

SPOCK will create a post-trip report and a pre-trip booklet which will be shared among the study tour participants and current or prospective electrical engineers. In this report you could highlight your business for extra visibility or for example provide a small article showing your newest developments.

Casework:

We are looking for case assignments, where the participants of the study trip complete an assignment specified by your company. By completing such an assignment, we can help finance our study trip while gaining valuable hands-on industry experience. Depending on your needs, this could involve designing electronic circuits, carrying out measurements and experiments, programming, or other technical tasks. Our group has expertise across a wide range of fields, including embedded systems, power electronics, and integrated circuit design.

Name on t-shirt:

All 21 tour participants will receive a T-shirt to be worn during the trip's preparation and the tour itself. We will ensure visibility for your company through promotional materials, on-campus at the University of Twente, and during visits to other companies throughout the tour.

LinkedIn post:

Our LinkedIn page reaches a vast network of current and future electrical engineers. This puts your company in the spotlight for potential employees, interns, and students looking to complete their graduation projects.

Name on the SPOCK website:

The SPOCK website will be the primary channel for people to follow our trip. It will be visited not only by electrical engineers but also by anyone in their networks following our journey, providing your company with a broad audience.

If you are interested in Sponsoring us or providing case work,
